On-device AI • Android Automation • Task Verification

THE PROBLEM

Voice assistants can answer. They don't reliably *act*.

Traditional Assistant

Understands the command, but often stops at a response.

ACE – Autonomous Voice Agent

Turns a spoken goal into a reliable sequence of actions, checks, and completion.

📌 **The Gap:** Traditional assistants understand but don't execute. ACE closes this gap with verification.

ACE closes the loop.

Understand Goal

Plan Actions

Observe &
Verify

Act via Intents

ACE is different because it doesn't stop at understanding a request or sending an instruction. It keeps the loop closed by checking what actually happened and confirming the outcome.

From voice to verified action.

USER

NATURAL LANGUAGE

LOCAL GEMMA 3N

RESPONSE / ACTION

ACE HANDS

ANDROID DEVICE

Gemma runs locally. Core reasoning stays on-device.

BUILD STATUS

ACE is already running.

✓ Android App Running on-device	✓ Gemma 3n E2B Instruct Q4_0 • 4-bit GGUF	✓ Local Inference Verified on-device
✓ Action Execution Android actions implemented and ready for task handling	✓ Voice Interaction End-to-end pipeline live with capture, inference, and response flow	✓ Verification Layer Architecture in place to confirm results before action completion

Status Summary

✓ Core AI engine loaded and running | ✓ Android integration complete | ✓ Voice pipeline end-to-end | ✓ Task verification system active

Ready for demonstration and deployment.

ACE doesn't just answer.

ACE acts.

UNDERSTAND

EXECUTE

VERIFY

Why ACE Matters

OFFLINE

Works without internet in remote areas

PRIVATE

No data sent to cloud servers

RELIABLE

Verifies every action completes successfully
